

Adding assets

Assets are external files like images or sound. We will start by adding an image that will appear on screen.

Create or download a png image and put it in the (new) `assets` directory in your project directory.

With a text editor (like Atom) create a `main.lua` file that loads and displays the image:

- Create a bee "table" (`bee = {...}`) defining the `x` and `y` coordinates of your image and the `img` placeholder that will contain the image data.

- In `load()`, load the `bee.png` image (or whatever your image file is called) into `img`.
- In `draw()`, ask Löve to draw the image at the given `x` and `y` coordinates.

```
local bee = { x = 175, y = 200, img = nil}
```

```
function love.load(arg)
  bee.img = love.graphics.newImage(
    'assets/bee.png'
  )
end
```

```
function love.draw()
  love.graphics.draw(
    bee.img,
    bee.x,
    bee.y
  )
end
```
