

# Check collision

With the right arrow key, you make a shoe move: when it hits the ball, the ball "jumps" to the right.

```
1 WIDTH = 640
2 HEIGHT = 480
3
4 shoe = Actor('shoe', (80, 200))
5 ball = Actor('ball', (230, 200))
6
7 def on_key_up(key, mod):
8     if key == keys.RIGHT:
9         shoe.x += 10
10
11 def update(dt):
12     if ball.colliderect(shoe):
13         ball.x += 50
14
15 def draw():
16     screen.fill((255, 255, 153))
17     shoe.draw()
18     ball.draw()
```

We use the `on_key_up` hook to bind the right arrow key with the shoe movement.

In the `update` function, we check if the ball touches (*collides*) shoe. If it's the case, the ball moves horizontally by 50 pixels.

# Check collision

With the right arrow key, you make a shoe move: when it hits the ball, the ball "jumps" to the right.

```
1 WIDTH = 640
2 HEIGHT = 480
3
4 shoe = Actor('shoe', (80, 200))
5 ball = Actor('ball', (230, 200))
6
7 def on_key_up(key, mod):
8     if key == keys.RIGHT:
9         shoe.x += 10
10
11 def update(dt):
12     if ball.colliderect(shoe):
13         ball.x += 50
14
15 def draw():
16     screen.fill((255, 255, 153))
17     shoe.draw()
18     ball.draw()
```

We use the `on_key_up` hook to bind the right arrow key with the shoe movement.

In the `update` function, we check if the ball touches (*collides*) shoe. If it's the case, the ball moves horizontally by 50 pixels.

# Check collision
